

Why Qube?

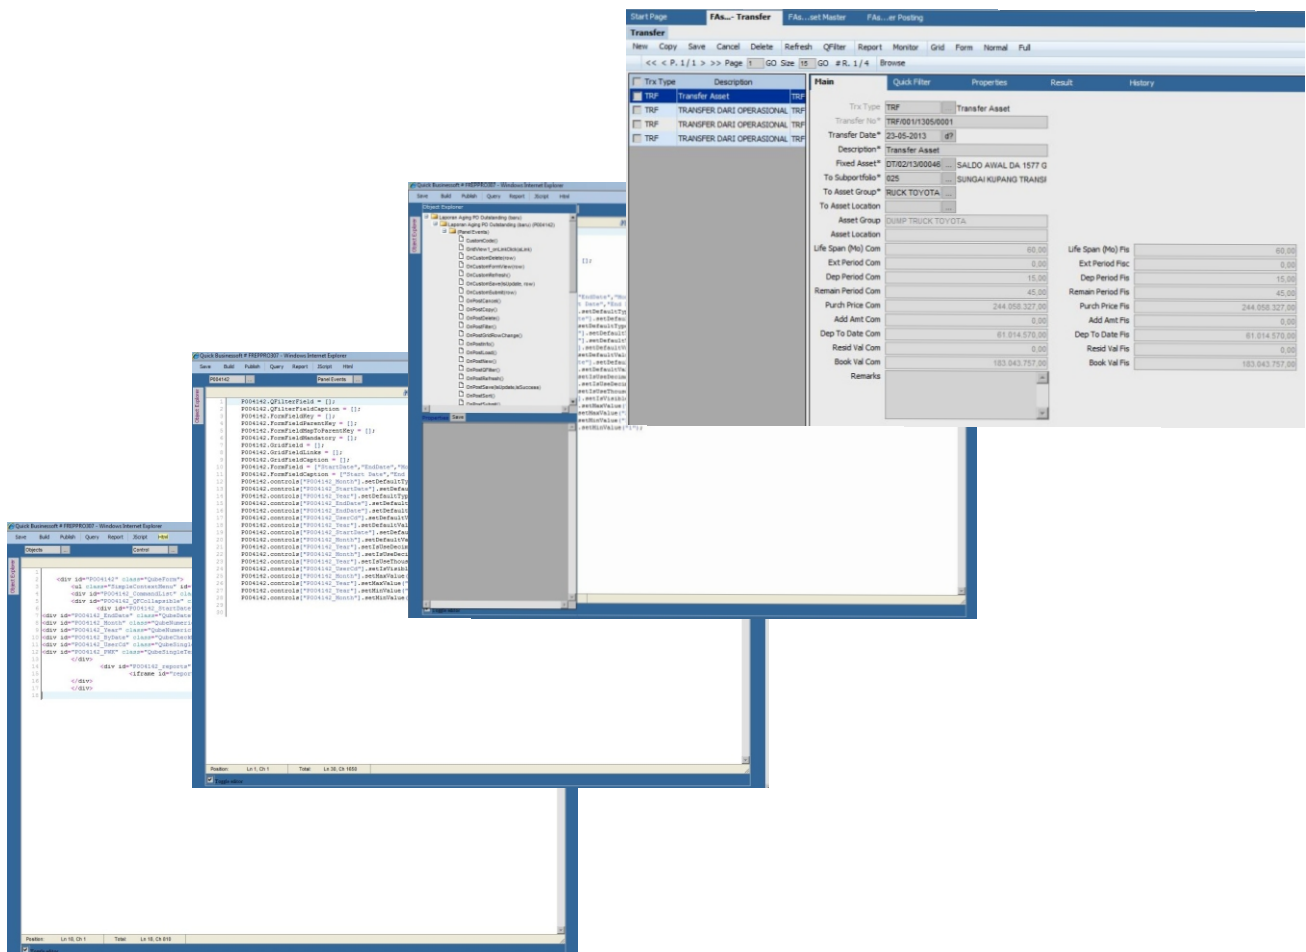

- A Quick Businesssoft is better at the programming things you do every day, like code editing, form developing, report generating, table formatting, and working with programming files.
- With a Quick Businesssoft you can do amazing things with photo, movies, and music – right out of the programming time as it shorten consuming programming things.
- Advanced technologies such as the latest compatibilities and next-generation IDEs come standard.

Quick Businesssoft

The ultimate all-in-one goes all out.

The new Quick Businesssoft features modular architecture, easy web server deployment, pure web based with no ActiveX or Applet, single on, embedded report component, no back-end administrative task, unlimited COA configuration, Windows Active Directory integration, and an advanced built-in SmartField, SmartKey and SmartReport. It is everything you want in a development tools. Now more powerful, more advanced and even more incredible than before.

The cornerstone of the new Quick Businesssoft is its ability to be configured to meet the needs of your business by customizing Businesssoft to your business process that is time-consuming and costly.

High performance reaches a whole new height.

Introducing the new Quick Businesssoft, now offering significant cost saving as no further investment required for web or windows based application development. It features state-of-the-art preconfigured template with built-in system design and analytical tools to instantly develop a business software. Meet all-new IDEs, most powerful Quick Businesssoft yet. All comes with business and functional source and encapsulated pre-built engine.

Approval builder

Approval builder is a tool for programmer to develop and deploy electronic form that facilitate and extend organization business processes, enabling auditable e-approval transactions.

Object explorer

Object explorer provides a hierarchical user interface to view and manage the objects in each instance of database. It presents a tabular view of instance objects, and the capability to search for specific objects.

Code editor

Code editor is a text editor program designed specifically for editing engine, process, and form, features to simplify and speed up input of engine, process, and form such as syntax highlighting, autocomplete, and bracket matching functionality.

Page configurator

Page configurator make page provisioning as easy as possible as sometimes developers found it hard to use and understand the built-in provisioning mechanism.

Database explorer

Database explorer is the server management console for Quick Businesssoft. Use this window to open data connections and to log on to servers and explore its database and system services.

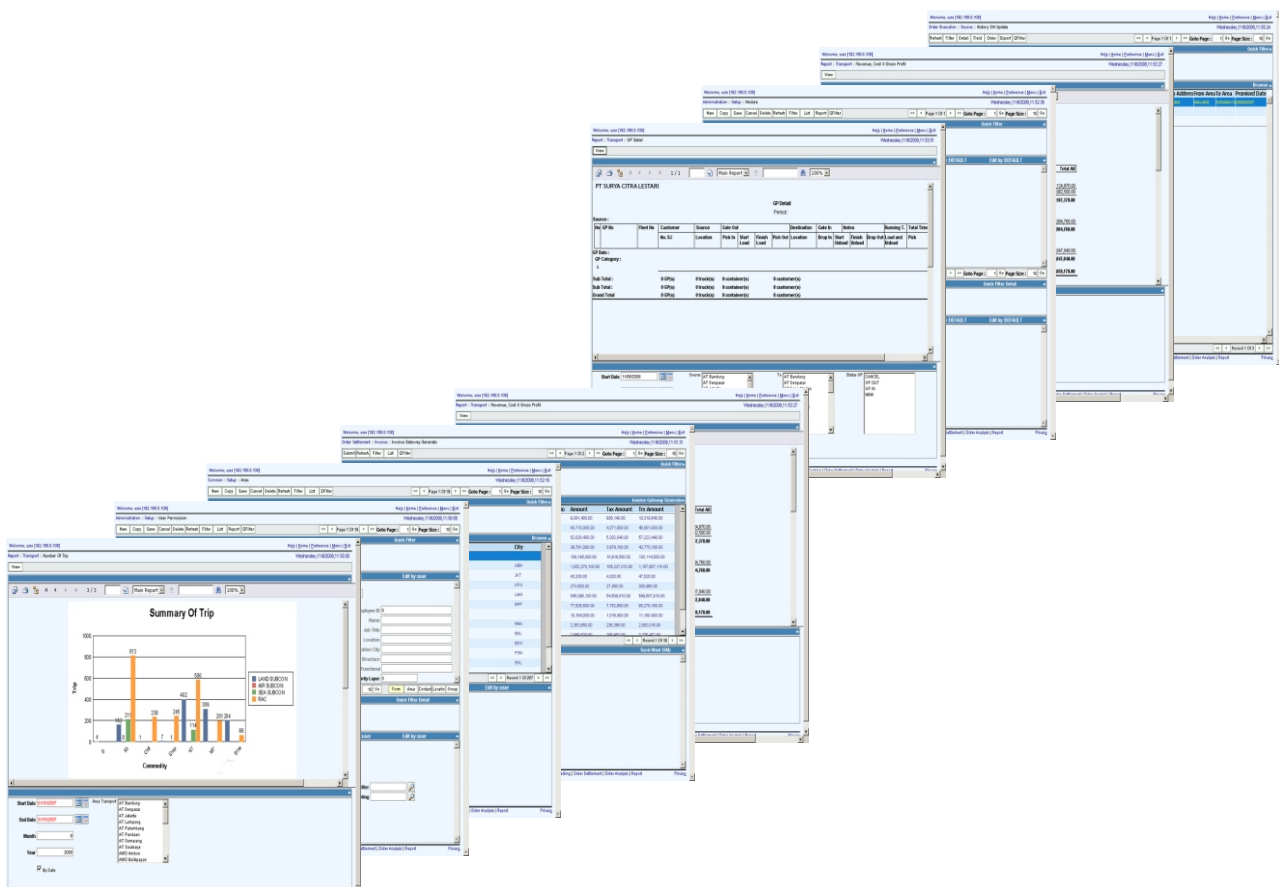

Workflow designer

Workflow designer within Quick Businesssoft is a visual designer and debugger for the graphical construction and debugging of windows workflow foundation in the .Net framework that is hosted in Quick Businesssoft development environment.

The development tool for everyone.

The new way for programming a business software. The next generation of Quick Businesssoft features standard “look and feel” navigation and transaction control, autocomplete functionality, breakthrough audit trail, all-new access control, next-generation embedded workflow capability, agile database architecture, and intuitive yet easy-to use GUI.

Quick Businesssoft System Compatibility

Redesigning in a very big way.

- Operating system: all Microsoft operating system with .Net framework
- Connection: low traffic and memory footprint
